FULL-STACK SOFTWARE ENGINEER

Software Engineer who ships across the full stack — from real-time Firebase apps to Django REST backends to Next.js platforms. Experienced in building REST APIs, real-time systems, and data-driven applications, with a track record of jumping into unfamiliar codebases and delivering under tight deadlines. Skilled in CI/CD automation, clean architecture, and multi-stack development. Interested in backend engineering, large-scale systems, and ML-driven platforms.

EDUCATION

Bachelor of Software Engineering

Graduation: May 2026

Concordia University, Montreal, QC

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Cloud Computing, Agile Development, Distributed Systems, Artificial Intelligence, Data Analytics, Testing & Quality Assurance

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, Java, SQL, Dart, HTML/CSS
- **Frameworks:** React, Next.js, Node.js, Express.js, Django REST, FastAPI, Flutter, GraphQL
- **Databases:** PostgreSQL, MySQL, MongoDB, Firebase, Supabase
- **Tools & Cloud:** AWS, Docker, Git, GitHub Actions, CI/CD, WebSockets, Vite, Tailwind
- **Practices:** Agile/Scrum, TDD, REST API Design, Code Review, Clean Architecture, Pre-Commit Hooks

PROJECT

Healthcare Management System — *PHP* → *Django, React, TypeScript, MySQL*

June 2025 - Present

- Team phase: sole PHP developer; co-designed MySQL schema, triggers, and indexing.
- Team achieved 75% query speedup (3s → 0.7s) via caching and schema redesign.
- Solo phase: rewrote full stack to Django REST + React/TypeScript.
- Built JWT authentication with role-based access control for admin, doctor, and staff workflows.
- Designed 15+ REST API endpoints powering interactive data analytics dashboards.
- Enforced automated code quality with 13 custom pre-commit hooks (flake8, ESLint, Prettier, Black).

VeloSim – Bike Network Simulator — *Python, React, PostgreSQL, Websocket*

Sep 2025 - Apr 2026

- Contributed to an 11-person team building an open-source simulation platform with BIXI Montreal.
- Implemented WebSocket frontend integration to handle live simulation updates and real-time data streaming.
- Developed frontend control features, including an "All Routes Toggle" to streamline map state management.
- Wrote unit tests with Vitest and conducted peer code reviews during weekly Agile sprints.
- Collaborated on core system architecture decisions, schema migrations, and data visualizations.

Real-Time Auction Platform — *React, Firebase, JavaScript*

May 2025 - Present

- Joined a non-developer team with < 1 week to deadline; finished their HTML + Firebase app for a live charity event.
- Took full solo ownership post-event: rewrote to React + Vite + Firestore with real-time bidding and admin CRUD.
- Implemented live Firestore snapshot listeners for instant bid sync across all attendees.
- Built admin dashboard with full CRUD and multi-image upload gallery; added lightweight guest auth.
- Migrated to Next.js + TypeScript + Supabase for a stable, long-term platform.

Campus Navigation App — *Flutter, Google Maps API*

Jan 2025 - April 2025

- Developed a cross-platform mobile application achieving 95% location tracking accuracy.
- Integrated Google Maps API and optimized pathfinding paths, reducing user travel time by 30%.
- Implemented real-time geolocation tracking, localized building data, and interactive UI components.
- Established a robust CI/CD pipeline using GitHub Actions to automate linting and build testing.

LANGUAGES – **Thai:** Native, **English:** Fluent, **Chinese:** Basic, **French:** Basic, **Japanese:** Basic
