FULL-STACK SOFTWARE ENGINEER

Software Engineer who ships across the full stack — from real-time Firebase apps to Django REST backends to Next.js platforms. Track record of jumping into unfamiliar codebases and delivering under tight deadlines, with skills in REST API design, real-time systems, CI/CD automation, and clean architecture. Interested in backend engineering, large-scale systems, and ML-driven platforms.

EDUCATION

Bachelor of Software Engineering

Graduation: May 2026

Concordia University, Montreal, QC

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Cloud Computing, Agile Development, Distributed Systems, Artificial Intelligence, Data Analytics, Testing & Quality Assurance

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, Dart, HTML/CSS

Frameworks: React, Next.js, Node.js, Express.js, Django REST, FastAPI, Flutter, GraphQL

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase

Tools & Cloud: AWS, Docker, Git, GitHub Actions, CI/CD, WebSockets, Vite, Tailwind

Practices: Agile/Scrum, TDD, REST API Design, Code Review, Clean Architecture, Pre-Commit Hooks

EXPERIENCE

San Fun Group

May 2025 – Present

Business Development & Consultant Intern

May 2025 – May 2026

- Rebuilt a non-developer team's live bidding web app into a production-grade platform for the company's charity event under a tight deadline, later evolving it into the org's long-term platform (see Real-Time Auction Platform project).
- Developed Vanasin Residence's public website using AI-assisted no-code development (Softr) with Monday.com as the backend database.

Business Development & Consultant

Jun 2026 – Jul 2026

- Designed and deployed automation workflows (Zapier, Make.com) integrating LINE, Monday.com, Google Sheets, and email, cutting manual process time by roughly 5x.
- Built internal AI-assisted tooling using Claude Skills and Projects to automate recurring operational workflows, reducing time spent on them by roughly 10x.

IT & Systems

Aug 2026 – Present

- Provide ongoing IT support and troubleshooting for the organization's systems and tools.

Digital Transformation Consultant (Independent, w/ Teeraporn)

Aug 2026 – Present

- Advising on digital transformation initiatives for a partner business unit within the San Fun Group ecosystem, operating independently.

PROJECT

Healthcare Management System — PHP → Django, React, TypeScript, MySQL

June 2025 - Present

- Team phase: sole PHP developer; co-designed MySQL schema, triggers, and indexing, achieving a 75% query speedup (3s → 0.7s) via caching and schema redesign.
- Solo phase: rewrote full stack to Django REST + React/TypeScript with JWT authentication and role-based access control for admin, doctor, and staff workflows.
- Designed 15+ REST API endpoints powering interactive data analytics dashboards; enforced code quality with 13 custom pre-commit hooks (flake8, ESLint, Prettier, Black).

VeloSim – Bike Network Simulator — Python, React, PostgreSQL, WebSocket

Sep 2025 - Apr 2026

- Contributed to an 11-person team building an open-source simulation platform with BIXI Montreal.
- Implemented WebSocket frontend integration to handle live simulation updates and real-time data streaming; wrote unit tests with Vitest and conducted peer code reviews during weekly Agile sprints.
- Developed frontend control features, including an "All Routes Toggle" to streamline map state management, and collaborated on core system architecture, schema migrations, and data visualizations.

Real-Time Auction Platform — React, Firebase, JavaScript

May 2025 - May 2026

- Rewrote a non-developer team's HTML + Firebase app to React + Vite + Firestore with real-time bidding and admin CRUD.
- Implemented live Firestore snapshot listeners for instant bid sync across all attendees.
- Built admin dashboard with full CRUD and multi-image upload gallery with lightweight guest auth; migrated to Next.js + TypeScript + Supabase for a stable, long-term platform.

Campus Navigation App — Flutter, Google Maps API

Jan 2025 - April 2025

- Developed a cross-platform mobile application achieving 95% location tracking accuracy.
- Integrated Google Maps API and optimized pathfinding paths, reducing user travel time by 30%, with real-time geolocation tracking and localized building data.
- Implemented interactive UI components and established a robust CI/CD pipeline using GitHub Actions to automate linting and build testing.
